

Tools for better

business

SAMSUNG

At Samsung, we don't just make mobile phones. We're dedicated to helping businesses of all types and size stand out from the crowd and be more successful. We have an entire ecosystem of mobile technology, support and services designed to help your customers work more effectively and do more than ever before.

Better equipped for smarter business decisions

1 Wider choice

Samsung is the world's leading mobile manufacturer. We offer the widest range of advanced smartphones, robust tablets, and next generation wearables. We're always innovating to add new features, like Samsung DeX, which turns your customers' phones into a PC. And our mobile technology is available at a variety of prices—helping your customers get the technology they need to advance their businesses—whatever they do, and whatever their budgets.

2 More business applications

With Samsung's Android OS your customers can access more specialist business apps than any other platform—with many optimised for use with Samsung DeX. Plus, our phones and tablets come with Microsoft Office 365 pre-installed¹, letting them view documents straight out of the box. Our mobile devices also feature exclusive business tools that you won't find on other phones or tablets, including Samsung Flow, DeX, Pay, Pass and 15GB of free Samsung Cloud storage.

3 Simple and intuitive

Samsung mobility products are simple and intuitive to use—so your customers can spend less time learning how to use them, and more time concentrating on their work. Transferring data from their old phones is quick and easy with Samsung Smart Switch. And with features and tools like split-screen working, multi-tasking, Samsung DeX and the S-Pen for faster annotation, your customers can work quickly and efficiently to get more done, wherever they are.

4 Unrivalled security

Every Samsung smartphone and tablet comes with Samsung Knox defence grade security built-in, working in the background to protect your customers' devices and business data. They're also equipped with biometric security—iris and facial recognition and fingerprint scanning—to keep them secure. And if a device gets lost, it can be located quickly with Find My Mobile. Your customers can even lock the screen remotely, back up information to the Samsung Cloud and delete all stored data. So, they can rest assured their sensitive information won't fall into the wrong hands.

5 Dedicated support

We want your customers' Samsung experience to be the best it can be. That's why every Samsung phone and tablet comes with a 24 month warranty and upgraded service levels as standard—giving them extra peace of mind. We also offer a free, UK-based, specialist business help centre to provide advice over the phone when they need it. And if they require technical support, we have experts on hand at more than 100 authorised service centres across the country. They'll also find plenty of helpful information on Samsung.com, as well as live chat to answer any questions.

6 Flexible financing

At Samsung, we can help your customers' budgets go further. We offer flexible financing options on our mobility products, so your customers can access the technologies that help them do more than ever before. With Samsung Capital, your customers won't be left with business tools that simply depreciate over time—helping them free up cashflow to invest in other areas of their business.

¹Microsoft Office 365 licenses sold separately.
